DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to a method for producing a lymphocyte or APC having tolerance to an allergen or an antigen, comprising incubating a lymphocyte or APC with a composition capable of upregulating expression of an endogenous Notch or Notch ligand and the allergen or antigen, classified in class 435, subclass 325.
 - II. Claims 13-16, drawn to use of a composition capable of upregulating expression of an endogenous Notch or Notch ligand in an APC or lymphocyte in a method of producing regulatory lymphocytes capable of suppressing the activity of other lymphocytes, classified in class 435, subclass 7.24.
 - III. Claim 17, drawn to a method of treating a patient suffering from a disease characterized by inappropriate lymphocyte activity comprising administering a lymphocyte produced by methods of Group I, classified in class 424, subclass 184.1.
 - IV. Claim 18, drawn to a method for producing a lymphocyte having tolerance to an allergen or an antigen comprising incubating an APC with a lymphocyte, classified in class 435, subclass 325.

The inventions are distinct, each from the other because of the following reasons:

Groups I-IV are unique methods. Groups I/IV, II and III differ with respect to their endpoints being drawn to a method for producing a lymphocyte or APC having tolerance to an allergen or an antigen, use of a composition capable of upregulating expression of an endogenous Notch or Notch ligand in an APC or lymphocyte, and a method of treating a patient suffering from a disease. Though the endpoints o Groups I and IV are the same, the groups differ with respect to their process steps since the method steps of Group I comprises incubating a lymphocyte or APC with a composition capable of upregulating expression of an endogenous Notch or Notch ligand and the allergen or antigen, and the method steps of Group IV comprises incubating an APC with a lymphocyte. Therefore, Groups I-IV are patentably distinct each from the other.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and because a search in the non-patent literature of any of these distinct inventions would not be co-extensive with a search of the others, an examination and search of two or more inventions in a single application would constitute a serious undue burden on the Examiner, restriction for examination purposes as indicated is proper.

Application/Control Number: 09/870,902

Art Unit: 1644

2. This application contains claims directed to the following patentably distinct species of the claimed invention: A) notch or notch ligand

B) a composition capable of upregulating expression of endogenous notch or notch ligand.

Regardless of which group is elected, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. For example applicant is required to elect:

A) a specific notch or notch ligand, such as one recited in claim 8, and

B) a specific composition comprising a specific number and identity of ingredient(s) of said composition, such as one of the polypeptides recited in claims 6 or 7.

The species are distinct because each of said species has a distinct structure with distinct biochemical properties which are conferred by said distinct sructure.

Currently, claims 1-18 are generic in at least one respect.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Application/Control Number: 09/870,902

Art Unit: 1644

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amy M. DeCloux whose telephone number is 703 306-5821. The examiner can normally be reached on M-F 8:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on 703 308-3973. The fax phone numbers for the organization where this application or proceeding is assigned are 703 305-3014 for regular communications and 703 872-9307 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 308-0196.

Amy DeCloux, Ph.D. Patent Examiner September 30, 2002 Patrick J. Nolan, Ph.D. Primary Patent Examiner, Group 1640
